PROFILE

Junior Unity Developer and Multimedia Specialist with a Bachelor's degree in Information Technology and hands-on, end-to-end experience building and shipping mobile games. Solo-developed and published "The Hunted," a roguelite survival action game on the Google Play Store, achieving a 300% performance improvement (13-20 FPS to 50-60 FPS) on low-end devices through code optimization and asset management. Comfortable working across the full development pipeline — gameplay programming, systems design, UI implementation, and store deployment — and integrating backend services such as Firebase, Google Play Games Services, Google Play Billing, and Google AdMob.

Beyond programming, brings practical experience in Agile project coordination, UI/UX design, video editing, 3D modeling in Blender, and graphic design — developed through coursework, a capstone project, and a professional multimedia/coordination role. This multidisciplinary background makes it possible to contribute across more than one area on a small or remote game development team, not just write code. Currently seeking a Junior Unity Developer, Game Developer, Gameplay Programmer, or Mobile Game Developer role.

TECHNICAL SKILLS

Game Development: Unity Engine, C#, Gameplay Programming, Game Design, Mobile Game Development, Mobile Game Optimization, Sprite Atlas Asset Management

Google & Backend Services: Google Play Console, Google Play Games Services (leaderboards, achievements), Google Play Billing (in-app purchases), Google AdMob, Firebase (cloud save)

Programming Languages: C#, HTML, CSS, Basic JavaScript

Version Control: Git, GitHub, Unity Version Control (Plastic SCM)

UI/UX: In-game UI implementation, user-centered interface design for client web/app projects

Multimedia & Design: Adobe Premiere Pro, Adobe After Effects, Adobe Photoshop, Blender (3D modeling, beginner/practice level), LibreSprite, Canva

Project Management: Agile Methodology, Scrum (Scrum Master experience), Sprint Planning, ClickUp, Project Coordination

Other: Web Design, Computer Troubleshooting, Basic Networking

GAME DEVELOPMENT PROJECTS

The Hunted — Bullet Heaven / Survival Action Game

Published on Google Play | play.google.com/store/apps/details?id=com.pixelnightproductions.thehunted

A fast-paced, Vampire Survivors-inspired survival game: fight off endless waves of enemies, level up, and build an overpowered setup across a 15-minute run culminating in a Final Boss fight. Includes a companion system that lets players unlock and upgrade allies who fight alongside them and scale in power. Now live on the Google Play Store.

- Designed and developed the complete game using Unity and C#, from concept through Google Play Store publication
- Programmed core gameplay systems: combat, enemy wave spawning, leveling/progression, and the companion system
- Integrated Google Play Games Services (leaderboards, achievements), Firebase (cloud save), and Google Play Billing (in-app purchases)
- Implemented Google AdMob rewarded ads for monetization
- Achieved a 300% performance improvement on low-end devices, raising FPS from 13-20 to 50-60, through code optimization and Sprite Atlas asset management

- Built inventory, progression, and upgrade systems to support player engagement and retention
- Designed unique enemy/beast characters with distinct weapons, abilities, and ultimate skills
- Handled UI implementation, testing/debugging, and Google Play store deployment
- Managed version control using Unity Version Control (Plastic SCM) and Git; published and maintained production builds

From Nowhere — Psychological Horror Game (Capstone Project)

Role: Game Designer / Programmer | Team of 3

A narrative-driven indie game about unraveling a mysterious house that blurs the line between memory and reality. Players wake from a nightmare and must explore dreamlike environments, interact with strange entities, and solve puzzles to uncover who they are and what brought them there — a story about self-identity, trauma, and redemption.

- Programmed core gameplay systems and mechanics for the capstone project
- Contributed to game design, puzzle design, and level structure
- Collaborated with a 3D modeler/artist (Kent Jarred Pilaes) and a writer (Jim Tamson) to integrate assets and narrative into the game
- Tested and debugged gameplay throughout development, including dedicated playtesting sessions

MULTIDISCIPLINARY CREATIVE WORK

In addition to programming, contributes across the creative side of a project — useful on small teams that need more than one skill set. Full portfolio available at ericjorbina.github.io.

Video Editing: Game trailers and development videos for The Hunted and From Nowhere; promotional videos for Fellowship Baptist College and a financial-agency client; personal and school creative edits using Premiere Pro and After Effects

3D Modeling (Blender, selected practice): Environment and prop assets for From Nowhere (fuse box, poster art), stylized scenes, and animation practice — beginner/practice level, built to support game projects rather than as standalone professional 3D art

Graphics & Design: Concept art, moodboards, logos, infographics, and promotional/marketing assets, including client-facing work produced during a professional multimedia role

PROFESSIONAL EXPERIENCE

MarTech Consultant | Project Coordinator

Oct 2025 – Present

Precoc Technologies

- Supported Agile project planning and coordination using ClickUp, ensuring smooth workflows and timely delivery of digital solutions
- Assisted executive leadership with scheduling, meeting coordination, documentation, and project tracking
- Collaborated with cross-functional teams to design and deliver websites, presentations, infographics, and marketing assets
- Helped improve internal workflows and documentation processes, increasing team efficiency
- Supported software and product initiatives through technical collaboration and design expertise

Student Trainee — Graphics Designer | Video Editor

Nov 2025

Precoc Technologies

- Designed and executed a comprehensive social media campaign for the company, increasing online presence and engagement
- Produced a promotional video for the BSIT course at Fellowship Baptist College, published by the school to attract prospective students
- Edited a promotional video for a top financial agency client, published on their website and YouTube channel
- Designed infographics, presentation materials, and visual assets for client projects, ensuring brand consistency
- Contributed to UI/UX design for client websites and applications, focusing on user-centered design principles
- Facilitated Agile development as Scrum Master, leading sprint planning, daily stand-ups, reviews, and retrospectives
- Coordinated project workflows using ClickUp, maintaining documentation and organizing development tasks
- Collaborated with developers and designers to deliver client projects on schedule

EDUCATION

Bachelor of Science in Information Technology

2021 – 2025

Fellowship Baptist College — Kabankalan City, Negros Occidental

High School & Senior High School

2015 – 2021

Binalbagan Catholic College — Binalbagan, Negros Occidental
